EDUCATION

B.Tech in Artificial Intelligence & Data Science, KJ Somaiya S.E.

Jul 2023 - May 2027

GPA: 9.55/10

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Machine Learning, Artificial Intelligence, Probability & Statistics, Data Visualization & Business Intelligence Tools, Cybersecurity

HSC (12th) – Sathaye College — 69%

Jun 2021 – May 2023

ICSE (10th) – CNMS School — 95.2%

Jun 2015 – May 2021

WORK AND PROJECT EXPERIENCE

Veefin Solutions Limited

Jun 2026 - Aug 2026

- RFP Automation System — Designed and deployed an RFP automation system to streamline proposal response workflows; containerized with Docker on AWS EC2, with Nginx as reverse proxy for traffic routing and load balancing; built in Python to automate repetitive steps in the RFP lifecycle, reducing manual effort for the response team
- Phishing Simulation & Security Awareness Training — Built an internal phishing simulation platform generating multiple attack-style email templates (credential harvesting, urgent-action lures, spoofed internal comms) with per-employee tracking URLs; clicks triggered redirection to a security-awareness training module, with click-rate analytics enabling data-driven identification of high-risk users

Thane Law Library - Library Management System

Jan 2026 - Apr 2026

- Architected user-friendly Library Management System (LMS) for 50+ senior lawyers and administrative staff managing 5,000+ books and 200+ magazines, reducing checkout time by 60% and boosting resource utilization by 30% using Python and SQL
- Deployed systematized fine calculation and overdue notifications, elevating collection efficiency by 40% and decreasing manual processing time by 75%

IT Department-KJSSE-Internship - Faculty Feedback System

Dec 2025

- Engineered web-based Faculty Feedback System automating creation, distribution, and collection of feedback forms across multiple classes using Next.js, Tailwind CSS, and MySQL with ER diagrams and role-based access, reducing administrative workload by 70%
- Enabled students to submit structured digital feedback while providing faculty and administrators with consolidated dashboards and real-time submission statistics, dramatically enhancing operational efficiency

AI-Powered Anomaly Detection in EV Charging Infrastructure

Aug 2025 – Oct 2025

- Developed AI-based anomaly detection framework achieving 94% accuracy in identifying cybersecurity threats (DoS attacks, user ID conflicts) across 1,000+ simulated EV charging station transactions
- Applied ML algorithms (Isolation Forest, LSTM, Autoencoder) and feature engineering to detect irregular charging patterns, lowering false positive rate by 35%; built scalable pipeline using Python, TensorFlow, and scikit-learn processing 10,000+ data points/hour

Onboarding Co-pilot

May 2026

- Built an AI onboarding platform ingesting GitHub repos via Tree-sitter AST parsing, embedding code chunks (Jina AI, 768-dim) into a metadata-filtered Pinecone vector store; 4-node LangGraph agent answers codebase queries with exact file/function/line citations
- Built a NetworkX topological sort engine for personalized 30-day learning paths and a Groq (Llama 3.3 70B) adaptive quiz system; shipped full stack (FastAPI, JWT, Supabase, React, Vite, Zustand), deployed on Render + Vercel

Root Cause Analyzer

Jun 2026

- Built an incident diagnosis pipeline combining programmatic anomaly detection (error spikes, OOM, connection pool exhaustion) with FAISS local vector search over an incident knowledge base; RAG pipeline (LangChain, sentence-transformers) grounds LLM analysis with confidence-scored fixes and runbooks
- Built a P1–P5 SRE-style severity scoring system and log compressor for production-scale logs; visualized cascade failures via D3.js force-directed graphs with Slack/PagerDuty-ready reports

Market Research Agent

Jun 2026

- Built a 5-node LangGraph pipeline (news, competitors, financials, trends, synthesis) using shared TypedDict state for progressive context accumulation, with Tavily search integrated across all nodes for grounded, hallucination-resistant analysis
- Enabled autonomous tool-use across 4 research phases to generate multi-source investment memos

AI Research System (agentstudio)

Jul 2026

- Built a multi-agent system with 8 specialist agents (Researcher, Summarizer, Writer, Critic, Fact Checker, Bias Detector, Citation Builder, Translator) on LangGraph's StateGraph, with conditional-edge feedback loops and human-in-the-loop interrupts
- Integrated DuckDuckGo/Wikipedia as research tools; streamed live agent activity to a React frontend via WebSockets

TECHNICAL SKILLS

Programming Languages: Python, SQL

Machine Learning & AI: TensorFlow, PyTorch, Scikit-learn, Keras, XGBoost, LightGBM, Random Forest, Neural Networks, Deep Learning, LangChain, LangGraph, RAG (Retrieval-Augmented Generation), NLP (NLTK, VADER, TextBlob), Computer Vision (OpenCV, dlib), Supervised Learning, Unsupervised Learning, Model Optimization

Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Plotly, Tableau, Power BI, Excel (Advanced), Statistical Analysis, Data Mining, ETL

Databases: MySQL, PostgreSQL, MongoDB

Web Development: Next.js, Tailwind CSS, Responsive Design

Tools & Frameworks: Git, GitHub, Streamlit, Jupyter Notebook, VS Code, Agile Methodology

Core Competencies: Machine Learning Model Development, Data Preprocessing, Feature Engineering, Algorithm Design, Problem Solving, Research & Development, Project Management

LEADERSHIP ROLES

- Core Team Member, Datazen (Data Science & ML Council, KJSSE)

Jul 2025 – Jul 2026

- Core Team Member, Shutterbugs (Photography/Videography Council, KJSSE)

Jul 2024 – Jul 2026
